Summary Report

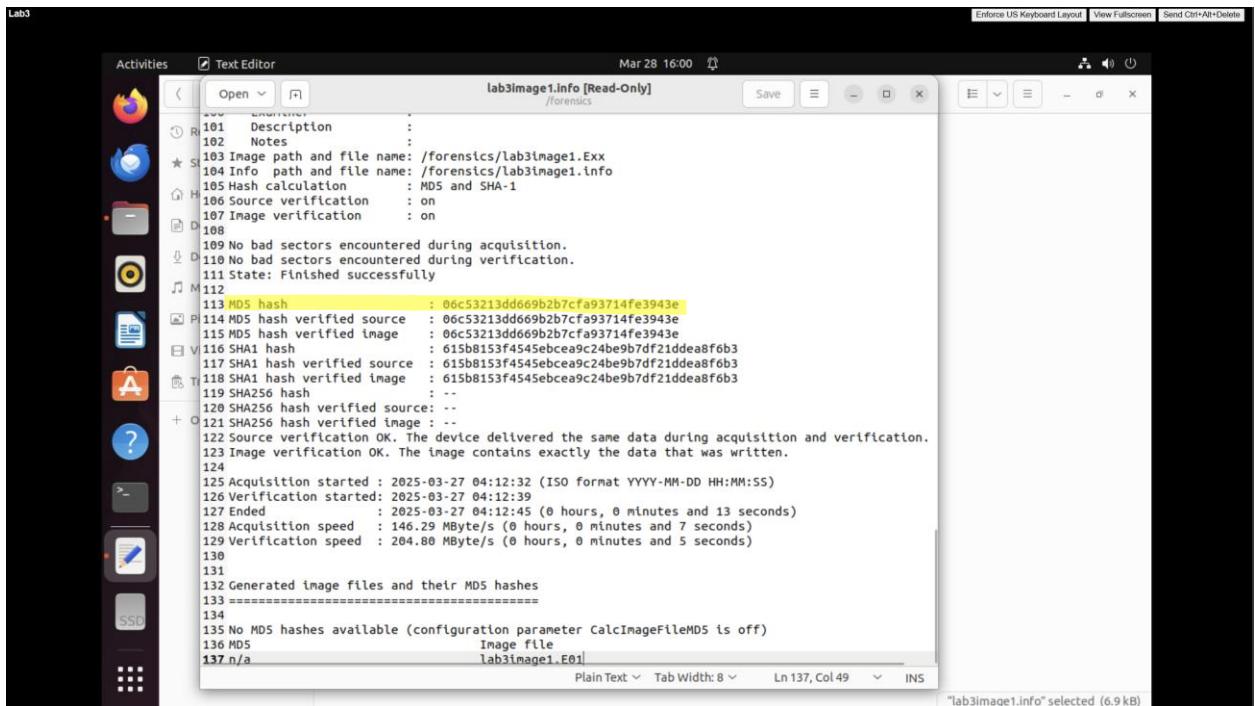

So basically, first and foremost the most crucial step in any digital forensic is to make a duplicate of the original data or disk on which the investigation is going on and then working on the duplicate copy of that disk. We do this to prevent any data lose or deletion from the original data or mess up the integrity of that original file which can also hamper the overall investigation. So, I used “Guymager” to make an image of that disk and then work or analyze that duplicate disk. Then we use a software known as “Autopsy” to analyze or investigate anything inside that disk. So, we make a new case with your name and your organization and select the copy image of the disk you shared with me to analyze it. After sometime, the Autopsy software will scan it completely for the options we selected it to detect and find in that disk like some type of deleted files or certain types of files, etc. So, on opening your primary disk, we get to see a lot of folders inside the disk like Desktop, Documents, Downloads, Music, Pictures, topo. We can also observe that there are two image files at the start, bearcat.png and NotanImage.svg which are two bearcat image I got to see. There is also one special folder named “CarvedFiles” which is created by Autopsy software and contains all deleted files inside it which when I open it, I observed two deleted images of bearcats inside it. After that, I accessed Desktop folder and there are 4 different files in which one is “_D.pedeef” which is pdf which contains bearcat image inside it, there is “meeting_notes.eml” which is a file that contains an already typed mail and opens with thunderbird mail which also contains bearcat image inside it and that desktop folder also has “macwd.E01” which is other MacOS Hard drive in which Bob accidentally deleted some of the flower photos which he needs back. Then we open Documents folder we get two files, one is “.hidden.jpeg” which is a bearcat image and “week1.odp” which is a presentation file that also contains a bearcat image inside it. Then we access Downloads folder to get two more files, “ahhhhhh” which is a bearcat image and also have “cute.tar.xz” that is a zip file which when extract, we get a bearcat image inside it. Then after that, I opened Music folder to get “Tutorial.mp4” file which is also a bearcat image.

Now, after finding all of the bearcat images, we need to find deleted flower images too so for that we need to access “macwd.E01” MacOS hard disk image which is in Desktop folder and then select “Add Data Source” and select that disk image to analyze it for our investigation. Then on opening, we observe space named vol0, vol1, vol3, vol4, vol5, vol6, vol7, vol8, vol9, vol10, vol11 in it. When we open vol3 and vol4, we can observe some flower images which are not deleted by Bob (so they are of no use to report) and also some other photos with them too. After that, when we open vol8, we observe “CarvedFiles” similar from primary hard drive which also contains all deleted files in it which also contains deleted flower photos which are essential for our investigation. So, on opening that folder, we get to see 7 different files in which f0007454.gif, f0002628.bmp, f0000575.jpg and f0009688.png which contains deleted flower images in it. Files such as f0007454.gif, f0002628.bmp and f0009688.png seems like same photos but are different which can be noted by observing hash value of those 3 images (different hash value means different images). In addition, there is a file named “f0007714.pcx” which can only be opened by certain programs that are not installed in my VMware but it’s for sure a flower’s image.

Hence, in total a found out 11 bearcats and 5 deleted flower photos in that drive which is essential for Robert (Bob) who is company’s president.

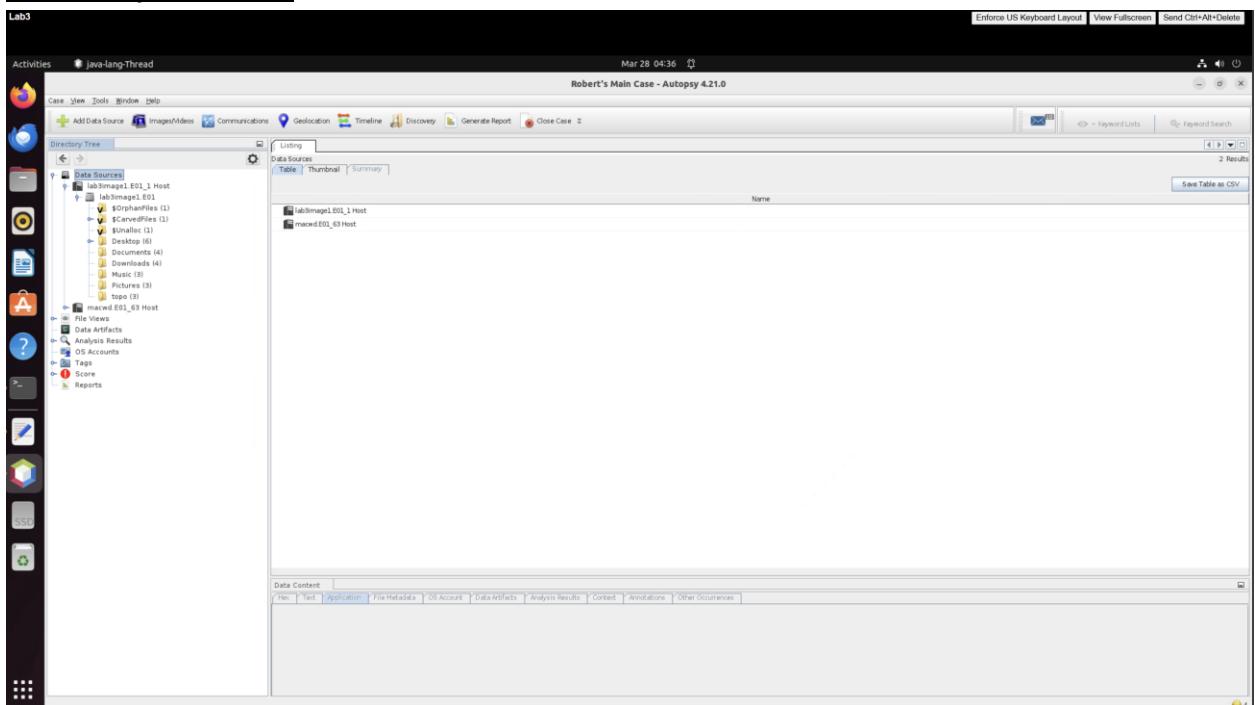

Appendix

1. MD5 hash value of the drive we imaged is 06c53213dd669b2b7cf93714fe3943e as highlighted below.

- **Bearcat Image 1-**

Name: /img_lab3/image1.E01/Downloads/Cute.tar.xz
Type: File System
MIME Type: application/x-xz

MD5: f6f2338547f7951b6319474e71a7775e

Modified: 2025-03-02 22:01:16 EST

This specific image is hidden a zip file called “Cute.tar” and we have to extract the image from inside it to access it.

- Bearcat Image 2-

Name: /img_lab3image1.E01/Desktop/meeting_notes.eml
Type: File System
MIME Type: multipart/related

MD5: 232bd5ae28471f54e7efac7d5762df78

Modified: 2025-03-02 22:16:56 EST

This is meeting_notes.eml file which we opened with thunderbird mail, we can see a already typed mail and a picture of bearcat attached to that mail.

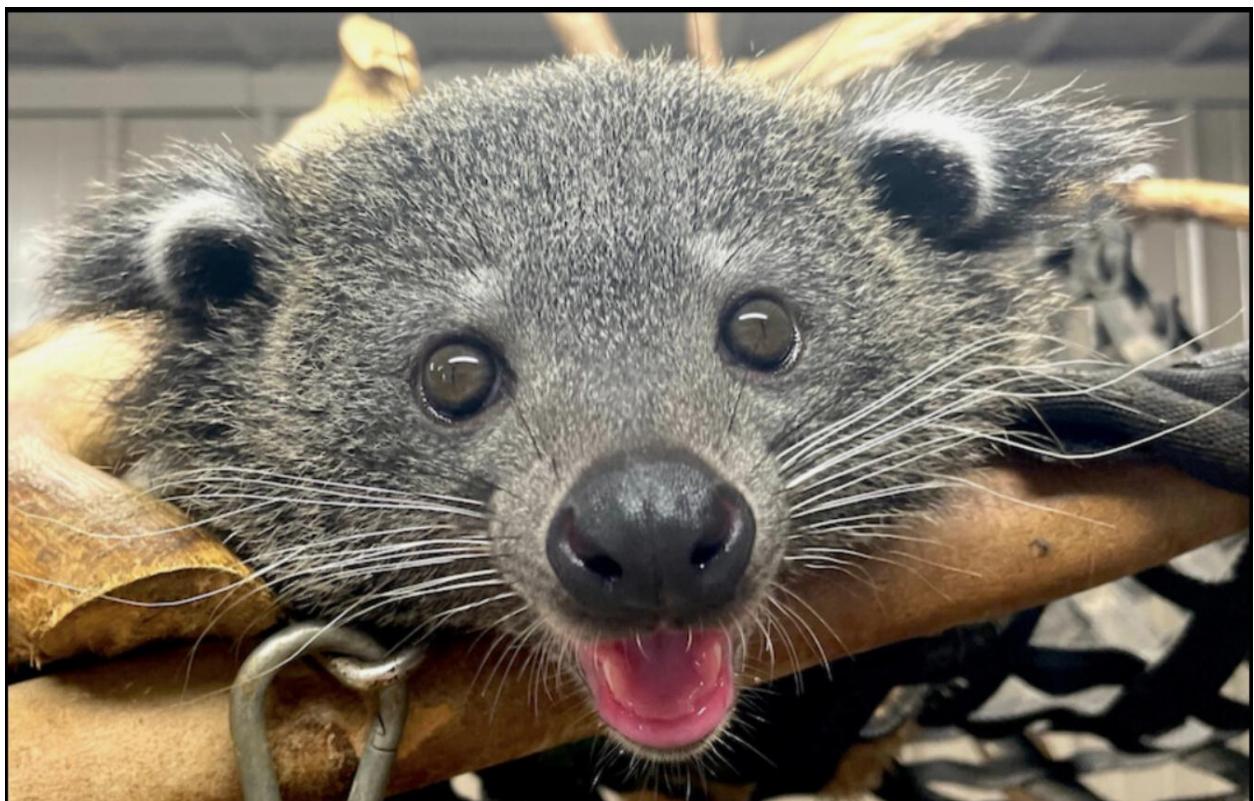

- Bearcat Image 3-

MD5: 0dc03092edbadf2f509053644e592b93

Modified: 2025-03-02 23:00:41 EST

Modified:

2025-03-02 22:45:15 EST

This image is hidden inside a pdf file named “_D.pedeef” which I opened and saved the bearcat’s image from 2nd slide.

- Bearcat Image 9-**

Name: /img_lab3image1.E01/Documents/week1.odp
Type: File System
MIME Type: application/vnd.oasis.opendocument.presentation

MD5: 83268666d0ba2e34812646214080fdः

Modified: 2025-03-02 21:54:44 EST

This image located inside a presentation file named “week1” and bearcat’s image can be saved from 2nd slide inside it.

- Bearcat Image 10-

Name: /img_lab3image1.E01/Music/Tutorial.mp4
Type: File System
MIME Type: image/jpeg

MD5: 55b4a9deea9e67e896c0e195505cf9b0

Modified: 2025-03-02 22:05:18 EST

This image is basically presented in mp4 format which can be converted into jpg format (which I convert during my investigation).

- Bearcat Image 11-

Name: /img_lab3image1.E01/Documents/.hidden.jpeg
Type: File System
MIME Type: image/jpeg
